Beautiful Body.

Achieving a smooth appearance to problem cellulite areas was once a challenge – either endure invasive, often painful procedures, or invest time and money in questionable topical treatments or diets.

The **VelaSmooth™**, powered by elōs™ technology – the combination of radio frequency and light energies, plus tissue mobilization with gentle suction – has changed everything. This is the **FIRST** and **ONLY** medical device **PROVEN** to safely and effectively re-contour the skin's surface to reduce the appearance of cellulite.

How does elōs work?

elōs is the only technology that reaches deep enough into the fat tissue to effectively improve the appearance of cellulite. The light energy pre-heats the treatment area. Simultaneously, a gentle suction aids in the deep penetration of the radio frequency energy into the fat tissue – redistributing and increasing the metabolism of the fat tissue.

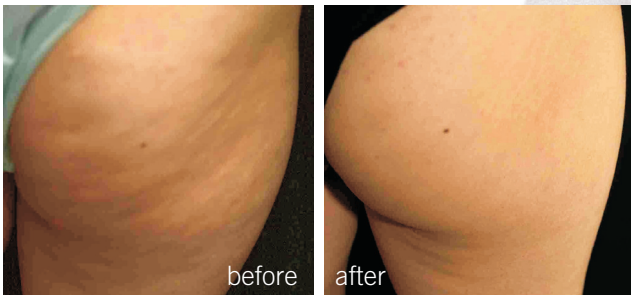

In addition to reducing the appearance of cellulite, and re-contouring of the skin's surface, the **VelaSmooth** also provides the added benefit of improved circulation, supporting overall health.

Does it hurt?

No. Cellulite treatment with the **VelaSmooth** is painless. Many patients compare treatment to a warm, relaxing massage. Treatments require no sedation, so this is a no-downtime procedure.

Expect the best only from the **VelaSmooth**.
